General Information

Short summary

A company based in central Poland, with over 25 years of experience, specializing in the spirits, chemical, pharmaceutical, food and energy industries. The SME offers a comprehensive range of services, including design, implementation, assembly, start-up, servicing and modernization of industrial and technological installations and facilities. Partners sought in all EU countries. The offered form of cooperation is a trade agreement with technical assistance.

Full description

The Polish manufacturer of industrial equipment and installations has experience and specialization in industries such as spirits, chemicals, pharmaceuticals, food and energy. The company offers a full range of services, including design and implementation of industrial installations and facilities, as well as their assembly, start-up and service. In addition, the company specializes in the modernization of existing installations and technological facilities, adapting them to modern standards and industry requirements. It also deals with the design and implementation of warehouse equipment. The company's priority is the efficient design of industrial automation, maximizing efficiency and promoting sustainable energy use.

Technologies for a sustainable future – The company modernizes existing facilities to adapt them to new technologies and regulatory standards. Renowned for its leadership in delivering innovative technological solutions, the manufacturer utilizes cutting-edge industry advancements that enhance efficiency, conserve energy, and minimize environmental impact. The company's solutions are designed to align with the principles of the circular economy.

The company bases its operations on the strong foundations of a design and technology office, modern machines and knowledge in the field of process and chemical engineering. Own laboratory and internal department dealing with professional organization of transport, including international.

The company offers comprehensive services, including:

- Design and construction of industrial installations - They specialize in the design and implementation of industrial installations, including the construction of new industrial facilities and technological lines, as well as the modernization of existing installations. They have advanced welding equipment, machine tools and CNC machines, which ensures high precision and repeatability of production.
- Distillation installations and rectification process - The construction of distillation installations and rectification processes includes the implementation of comprehensive industrial facilities for the production of ethyl alcohol. The

company has knowledge and experience in the design of agricultural and industrial distilleries (production includes processes from raw material preparation, mashing, fermentation, distillation, spirit storage, evaporation station, DDGS drying plant and technological boiler room).

- Industrial tanks - The company specializes in the production of high-quality steel industrial tanks, dedicated to the chemical, food, pharmaceutical and spirits industries. The offer includes pressure, non-pressure and low-pressure tanks, intended for the storage of various substances, including flammable and corrosive, as well as technological pipelines. Tanks, made of high-quality steel, meet the most stringent industrial standards. Process engineering, thermal processes, heat recovery
- Process engineering, thermal processes and heat recovery include a number of operations related to the heat treatment of substances, changing their physical state and transferring thermal energy. The company specializes in thermal processes, in particular in technologies such as evaporation, drying, absorption and cooling.
- Process equipment - The company specializes in the production of process equipment, offering innovative solutions for the industry. The range includes devices such as columns, heat exchangers, chemical reactors, process tanks, mixers, pressure tanks and evaporation and drying systems. The comprehensive offer includes a full range of activities - from design, through production, to delivery directly to the customer.
- Heat exchangers - The company produces a wide range of heat exchangers, necessary in many industrial sectors. It offers shell-and-tube, plate and spiral heat exchangers, as well as solutions adapted to clean and contaminated media. In addition, the company provides waste recovery and regeneration service

Advantages and innovations

- Many years of experience in the spirits, chemical, pharmaceutical, food and biofuel industries
- Comprehensiveness in order fulfillment
- Production area 6200 m²
- Warehouse area 7000 m²
- Highly qualified staff
- As one of 61 companies in Poland has the status of a research and development center, awarded by the Polish Ministry of Economy
- The manufacturer offers solutions in line with the assumptions of a closed-loop economy
- The company's solutions are designed to align with the principles of the circular economy

Partner Sought

Expected role of the partner

Polish manufacturer of industrial equipment and installations, experienced in industries such as spirits, chemicals, pharmaceuticals, food and energy, is looking for partners to cooperate on joint projects (SMEs and large companies), i.e. those in need of high-quality technological equipment, industrial automation solutions and energy recovery systems. The manufacturer is willing to cooperate with companies that are looking for modern technological solutions, innovative methods in the field of industrial installations and strive to increase the efficiency of production processes and minimize operating costs. The company is looking for partners across all EU countries. Cooperation based on a trade agreement with technical assistance
