General Information

Short summary

A Kosovo-based software engineering company seeks international partners for long-term software development cooperation, IT outsourcing and subcontracting. The company offers custom software solutions, dedicated development teams and flexible engineering capacity to technology companies, digital agencies, SaaS providers and enterprises seeking reliable software development partners.

Full description

The company is a Kosovo-based software engineering provider offering custom software development, dedicated engineering teams and IT outsourcing services to international clients.

Its areas of expertise include full-stack software development, web and mobile applications, enterprise software solutions, Software-as-a-Service (SaaS) platforms, API development and system integration, software maintenance and technical support.

The company provides flexible cooperation models, ranging from dedicated development teams that complement existing in-house capabilities to the delivery of complete software projects tailored to clients' technical requirements and business objectives.

Through its engineering expertise and adaptable delivery approach, the company aims to support international businesses in scaling their development capacity, accelerating product development and maintaining software solutions efficiently.

The company is seeking international cooperation with software development companies, IT consultancies, digital agencies, SaaS providers and enterprises interested in outsourcing, subcontracting or establishing long-term software development partnerships.

Advantages and innovations

Flexible engineering capacity: Dedicated development teams that can be integrated into clients' existing workflows and projects.

Cost-effective services: Competitive software development services offering an attractive nearshore outsourcing option.

Tailored solutions: Custom software development aligned with partners' technical specifications and business needs.

Direct technical communication: Close collaboration between clients and the software engineering team throughout the development process.

Flexible cooperation models: Availability for project-based assignments, subcontracting and long-term outsourcing arrangements.

European time-zone compatibility: Convenient working-hour overlap supporting communication, coordination and efficient project delivery.

Scalable development support: The ability to provide additional technical resources as project requirements and development priorities evolve.

Technical specification or expertise sought

The company offers expertise in full-stack software development, web and mobile application development, SaaS platforms, enterprise software, API development and integration, database management, software maintenance and technical support.

The company is interested in cooperation opportunities requiring additional software engineering capacity, the development of custom digital solutions, integration of software systems and ongoing technical support.

Partner Sought

Expected role of the partner

The company seeks international software development companies, IT consultancies, digital agencies, SaaS providers and enterprises requiring additional software engineering capacity.

Potential partners are expected to engage in one or more of the following cooperation arrangements:

Outsourcing of software development activities.

Subcontracting of software engineering tasks or complete development projects.

Engagement of dedicated development teams to complement existing in-house teams.

Joint delivery of digital solutions for clients and end users.

Long-term cooperation involving software development, integration, maintenance and technical support.

Partners should have clearly defined software development needs and an interest in establishing reliable, mutually beneficial commercial relationships.
