General Information

Short summary

Latvian Business support organization in wood sector from Latvia wants and can be a project partner in projects related to wood construction, wood sector, innovations, export.

Full description

The Latvian Business Support Organization in the wood industry has been operating since 2012 to promote cooperation between companies in the wood construction industry and strengthen the demand for wooden buildings both in Latvia and in export markets. The organization firmly believes that the wider use of wood in construction can effectively address climate, economic, social, and regional development challenges while contributing to a more sustainable future.

Strategic Directions

The organization focuses on two key strategic directions to promote wood construction:

- Promoting the local market – fostering collaboration among industry players, supporting innovation, and increasing awareness of wood as a sustainable and efficient building material in Latvia.
- Developing export markets – assisting Latvian wood construction companies in expanding internationally by facilitating networking opportunities, trade missions, and participation in international exhibitions.

Commitment to Innovation and Technology

With strong traditions and a forward-thinking approach, the organization values modern technologies and continuous development. It actively demonstrates that wood is a versatile, durable, and efficient building material with broad applications in the construction industry. The organization operates in various segments, including:

- Traditional log house construction – preserving craftsmanship and heritage while incorporating modern solutions.
- Wooden frame and modern modular construction – ensuring efficiency, adaptability, and cost-effectiveness.
- Development and production of glued laminated timber (glulam) solutions – enabling innovative architectural possibilities and expanding the use of engineered wood.

Collaboration with Research and Education Institutions

Collaboration with research institutions is crucial for the organization's growth and development. Innovation and value-added growth are not possible without scientific research, new technologies, and the introduction of advanced processes.

The organization works closely with scientific and research institutions to:

- Support members' research and development (R&D) efforts.
- Facilitate the creation and testing of new products and solutions.

- Improve production processes and workflow efficiency.

Furthermore, the organization is dedicated to strengthening ties with educational institutions. Since its establishment, it has actively organized initiatives to introduce students to real-world production facilities, industry-specific challenges, and career opportunities in the wood construction sector. These efforts ensure a well-prepared future workforce and contribute to industry development.

International and Local Project Experience

The organization has extensive experience in managing and participating in both local and international projects. It has successfully acted as a lead partner and project partner in various European funding programs, such as Interreg, the Central Baltic Programme, and others. Through these initiatives, the organization contributes to knowledge exchange, research-driven solutions, and the development of globally competitive wood construction businesses.

By fostering collaboration, innovation, and sustainable construction practices, the Latvian Business Support Organization continues to play a key role in shaping the future of the wood construction industry, both in Latvia and internationally

Advantages and innovations

The Latvian Business Support Organization in the wood industry stands out with its commitment to innovation, cutting-edge technologies, and high-quality solutions that drive the competitiveness of Latvian wood construction companies in local and international markets.

One of the key strengths of the organization is its close collaboration with leading research institutions and specialized laboratories, which enables continuous product and process development. Through rigorous testing and research-driven innovation, the organization ensures that wood-based construction solutions meet the highest industry standards in terms of durability, energy efficiency, and sustainability.

State-of-the-Art Technologies and Competitive Edge

To support its members in achieving excellence, the organization promotes the adoption of advanced manufacturing technologies and automation. Companies operating within the organization's network have access to:

- High-precision CNC machining for custom wood processing and modular construction components.
- Specialized drying and treatment facilities that enhance wood durability and fire resistance.
- Innovative adhesive and bonding solutions for the production of high-strength glued laminated timber (glulam) structures.
- Smart digital design tools and BIM (Building Information Modeling) integration to improve efficiency in design and construction processes.

These technologies not only optimize production efficiency but also enhance the quality and sustainability of wooden buildings, making them a preferred choice in modern construction.

Sustainable and Energy-Efficient Solutions

Sustainability is a core value of the organization, and it actively promotes environmentally friendly building materials that reduce carbon emissions and improve energy efficiency. Members of the organization specialize in:

- High-performance insulation systems that maximize energy efficiency in wooden buildings.
- Passive house and near-zero energy building solutions.
