General Information

Short summary

A Swedish company specializing in chain sharpening services for forestry machines and chainsaws is seeking suppliers of chain spools/rolls and connecting links. The company aims to establish supplier agreements to support its manufacturing and sharpening operations.

Full description

Company's business started in the autumn of 2024. With over 50 years of experience in forestry - from working with chainsaws to following the evolution of modern machines - comes a deep understanding of how essential sharp chains are for high-quality work. To ensure the best results, the company uses wet grinding with one of the latest sharpening machines. The studies show that sharp chains can reduce fuel consumption by at least 6% — which benefits both the economy and the environment.

The company specializes in sharpening chains for forestry machines but when the chains are too worn to sharpen, the company makes new ones by cutting chain spools/rolls to the right length — depending on whether the customer is doing final felling or thinning. The company is currently looking for suppliers of high-quality chain spools/rolls for both forestry machines and chainsaws.

-For forestry machines, spools/rolls with dimensions 0.404" and 2 mm, along with the right connecting links to

assemble them.

-For chainsaws, spools/rolls with dimensions 0.325" and 1.3 mm, also with matching connecting links.

In Sweden, there are several chain brands like Stihl, Carlton, and Harvester where Stihl is the most expensive and the 0.404" / 2 mm size is standard across brands.

Since the company sharpens chainsaw chains and is interested in buying pre-made chains in the future too, they are especially interested in finding 0.325" / 1.3 mm rolls to make new chains at a better price than what's currently available.

Advantages and innovations

- Better prices and higher quality compared to existing suppliers
 - Ability to customize chain lengths based on customer needs
 - Expertise in both sharpening and manufacturing chains
 - Potential for long-term supplier relationships
-

Technical specification or expertise sought

Spools/rolls of forestry machine chains 0.404 inches, 2 mm, along with connecting links to assemble them. Chainsaw chain spools/rolls in 0.325 inches, 1.3 mm, and the corresponding connecting links
